* Previously 240mm

The first number of each pair is heddle length, the second number is the size of the eye. Colors indicate the colors of the twist ties used to bundle each heddle size. Polyester heddles are measured from end to end. Metal heddles are measured from the middle of one heddle eye to the middle of the other. To replace a 9" metal heddle with Texsolv, for example, choose the Texsolv heddle closest to but longer than 9" (by at least 3/8") to fit around the heddle bars.
